

## RAM-TRACK Field Shelter Flooring

### Materials:-

- Rubber crumb bonded with resin
- Plastic honeycomb grid base

### Installation:-

- Rubber & resin mixed on site and wet poured like tarmac into the grid
- Surface is then graded to suitable depth, typically 40mm
- Rubber is compacted & rolled to desired finish and left to cure (24hrs in normal ambient conditions)

### Applications:-

- Field shelter bases, both inside and out
- Any areas of heavy footfall, such as water troughs and gateways

Before

After

### Features & benefits:-

- Horse comfort
- Totally porous – effective drainage
- Non-slip
- Durable
- Low environmental impact
- Constructed from 93% recycled materials
